

24 Gabion Baskets

Wire Cages for Retaining Walls, House Builds & Wall Solutions

We are able to offer customized Gabion Baskets, made to order from our supplier to tailor to your requirement.

Gabion baskets are supplied flat packed direct to site.

On site, the mesh gabion unit is opened out in the required position and the sides, diaphragms, face and rear panels are rotated to the vertical position and joined with a continuous lacing operation (wire supplied as standard), helicals or 'C' rings (supplied at additional cost). Joints between courses are normally continuously laced or clipped with 'C' rings.

Once assembled, the mesh gabions are filled with stone or rock and the lid secured to form a monolithic structure in accordance with the recommended installation procedures.

Examples are of Gabion Baskets being used on projects from our supplier's case studies. These are customized & made to order, please contact us for more information.
